### ***Background***

The Southern / Poplar Corridor is a major east-west arterial roadway system in Shelby County, TN. The corridor plays an important role as a business/transportation corridor for the region and as a result has attracted enormous growth and development along it. The section of Norfolk Southern Railroad being studied follows the Southern/Poplar Corridor from the Norfolk Southern Rail yard (Forrest Yard) east of East Parkway to the east Shelby County boundary. The increased train traffic on this section is causing interruptions on the north-south arterials along the corridor. This creates a safety hazard, disrupts traffic, including the movement of emergency vehicles, and increases congestion which impacts the air quality and economic vitality along the corridor. With the increase in the average daily vehicle trips along the corridor, improvements to the existing corridor system are needed.

### ***Services Required***

The purpose of this project is to study all the at-grade crossings with Norfolk Southern Railroad east of Forrest Yard, the major north-south roads along the Southern / Poplar Corridor and develop a plan that improves functionality of the north-south major roads, while not adversely affecting the flow of east-west traffic adjacent to the railroad, which meets community and environmental needs.

The consultant should provide detailed approaches for each task and also describe deliverables, milestones, and a public involvement plan. In addition to the stated tasks, consultants are encouraged to propose additional tasks, and/or methodologies that are relevant and might enhance this plan

The Southern / Poplar Corridor Study will focus on providing the following tasks/outcomes:

1. Data collection of existing traffic volumes, crash data and expected future traffic volumes for the study area, by horizon years

2. Inventory of at-grade and grade separated crossings
3. Inventory of types and location of utilities and drainage along the corridor
4. Analysis of emergency vehicles data which will include, but is not limited to, station locations, area of service, frequency of response calls including number of times the railroad traffic interrupts or alters the response of the emergency vehicles
5. Inventory of average daily railroad traffic, length of trains, average speed in the corridor, locations of rail sidings, and impact of yard limits the yard limits on the train speed at the west end of the corridor on train speed
6. Identification of potential social and environmental impact
7. Identification of major traffic generators and anchors in the Corridor

#### **Alternative analysis of grade separated crossings along the Southern/Poplar Corridor**

1. Identification and analysis of grade separated locations, including build and no build options which provide creative solutions to the issues identified
2. Profile of the entire study area which includes parallel and perpendicular routes to determine traffic impacts if grade separation work is undertaken. The profile should include topographical information at the 2' contour level, with specific detail of identified crossings which have a high probability of grade separation.
3. Develop cost estimates-include intermittent operation cost to keep trains running.
4. Recommend preferred alternative based on the following criteria:
  - Safety
  - Congestion
  - Air Quality
  - Community Impacts (noise pollution, light pollution, aesthetic impact)
